## Permit to Work Training Courses

A permit to work system ensures a formal check is made whenever hazardous work is to be undertaken. It establishes that all elements of a safe system of work are in place before anyone is allowed to carry out work where the Permit to Work is in operation.

### Aims of the course

The aim of the course is to ensure that delegates understand the function of permit to work systems and to ensure that they function correctly.

### Objectives

The course covers the following aspects of Permit to Work systems:

- Human Factors
- Management of Permit to Work Systems
- Objective of Permit to Work Systems
- Types of Permits required,
- Contents of Work Permits

### The structure of the course

Essential features of a Permit to Work System which are covered by the course are:

- Clear definition of who may authorize particular jobs.
- Provision to ensure that contractors who are engaged to carry out work, are covered by the system.
- Training and Instruction for issuing permits.
- Monitoring and auditing to ensure that the system works as intended.

### Number of Delegates

This course is suitable for up to a maximum of 12 delegates.

### Who should attend

Any person responsible for issuing, signing off and using permits to work..

### Certification

All delegates will receive a certificate of attendance.

**Course Duration** Half day duration or One day duration.
